          producing such polypeptides by recombinant techniques. The disclosed are methods for utilising NOGO-C polypeptides and polymucleotides in the treatment of diseases including neuropathies, spinal injury, brain injury, stroke, neuronal degeneration, for example Alzheimer's disease and Parkinson's disease, neuromuscular disorders, psychiatric disorders and developmental disorders. Also provided are methods for identifying agonists and agonists for use in treating conditions associated with NOGO-C imbalance, and disagnostic assays for detecting diseases associated with inappropriate NOGO-C activity or levels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; Nogo receptor; axonal growth; immunogen; antibody; nogo protein; cranial trauma; cerebral trauma; spinal cord injury; stroke; demyelinating disease; multiple sclerosis; monophasis demyelination; encephalowyelitis; multifocal leukoencephalopathy; panencephalitis; Marchiafava-Bignami disease; pontine myelinolysis; adrenoleukodystrophy; Pelizaeus-Merzbacher disease, Spongy degeneration; Alexander's disease; Canavan's disease; metachromatic leukodystrophy; viral infection;

The invention relates to the use of the nogo receptor, nogo protein, their nucleic acids, vectors expressing them and antibodies against them, to isolate agents which block nogo receptor mediated axonal growth. The agent is useful for treating a central nervous system disorder which is a result of cranial or cerebral trauma, spinal cord injury, stroke or a demyelinating disease selected from multiple

The present invention relates to a new method of identifying modulators of Nogo function or BACE activity. The method involves providing Nogo and BACE BOLYpeptides, and determining if the test agent interaction between these polypeptides, and determining if the test agent is a modulator of Nogo or BACE activity. The method is useful in treating acute neuronal injuries, such as spinal or head injury, stroke, terations in the proposition of peripheral nerve damage, and in neoplastic (e.g. glioblastomas), hyperproliferative or dysproliferative disorders (e.g. cirrhosis, psoriasis, keloid formation, fibrocystic conditions, tissue hypertrophy) of the central nervous system. The BACE polypeptide is cirrhosis, psoriasis, keloid formation, fibrocystic conditions, tissue hypertrophy of the central nervous system. The BACE polypeptide is useful in screening methods to identify agents that may act as modulators of BACE activity and in particular agents that may be useful in treating Nogo-associated diseases. The modulators of Nogo or BACE polypeptides, and the polymucleotide encoding the EAGE polypeptide are useful in cereponsive to the modulation of Nogo or BACE polypeptides, and the polymucleotide encoding the treatment or prevention of disorders cymptoms or improving the condition of apatient wiffering from this disorder, in axon regeneration, or in preventing metastasis or spreading of a cancer. The polymucleotide may also be an essential component in assassy, a probe, in recombinant protein synthesis, and in gene therapy techniques. The present amino acid sequence represents the human NogoA protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1064 IQKSDEGHPFRAYLESEVAISEELVQKYSNSALGHVNCTIKELRRLFLVDDLVDSLKFAV 1123

The method involves administering NS-specific activated T cells, NS-specific antigen, its analogue or its peptide, a nucleotide sequence the NS-specific antigen or its analogue or combinations. The method is useful for promoting nerve regeneration and preventing neuronal degeneration in central/peripheral nervous system from injury/disease, where the injury is spinal cord injury, blunt trauma, penetrating trauma, hemorrhagic stroke, ischaemic stroke or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nerve regeneration; neuroprotection; neuronal degeneration; CNS; PNS; central nervous system; peripheral nervous system; tranquillizer; Nogo; vulnerary; cerebroprotective; anti-tumour; antidiabetic; anticonvulsant; noctropic; antiparkinsonian; ophthalmological; analgesic; hepatotropic; osteopathic; vasotropic; nephrotropic; cytostatic; antigen; gene therapy;

                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated polynucleotide (I) comprising: (a) any of a group of over 4000 nucleotide sequences (ABV94628-ABV99185); (b) complements of (a); (c) sequences consisting of at least 20 contiguous residues of (a); (d) sequences consisting of at least 20 contiguous residues of (a); (d) sequences having at least 75% or 90% identity to (a); or (f) degenerate variants of (a). Polypeptides (ABP68596-CC (a); or (f) degenerate variants of (a). Polypeptides (ABP68596-CC (a); and compositions comprising polypeptides, polymucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells expressing the polypeptide are useful in treating pancreatic cancer and stimulating an immune response. The polymucleotides can be used as propers or primers for nucleic acid hybridisation, in the design and proparation of tibozyme molecules for inhibiting expression of the tumour polypeptides and proteins in the tumour cells, in vaccines and for gene thereby. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at ftp.wipo.int/pub/published_pot_sequences

The invention relates to a novel nucleic acid encoding a polypeptide comprising amino acid residues 27-109 of a 473 amino acid sequence (Pl., human Nogo receptor (NgR) NTLRCT domain), or residues 27-309 of Pl., than the first 39 consecutive, and less than a complete CTS domain, provided that a partial CTS domain, if present, consists of no more than the first 39 consecutive residues. The nucleic acid of the invention has neuroprotective activity. The polymocleocide may have a use in gene therapy. The nucleic acid is useful for decreasing inhibition of axonal growth by a central nervous system (Ns) neuron. The NgR coppendent signal transduction in the central nervous system meuron may be used in treating central nervous system disease, disorder or injury. Expression of an NgR protein may be associated with inhibition of axonal regeneration following cranial, cerebral or spinal cord injury. Expression of an NgR protein may be associated with inhibition of axonal regeneration following cranial, cerebral or spinal crauma, stroke or a demyelinating disease, such as multiple sclerosis, monophasic demyelination, encephalomyelitis, multifocal

C sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1004 SVVDLLYWRDIKKTGVVFGASLFLLSLTVFSIVSVTAYIALALLSVTISFRIYKGVIQA 1063

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
```

```
The present invention relates to an isolated truncated Nogo-A polypeptide that corresponds to a truncated form of the Nogo-A protein from the rat and from the human. The truncated polypeptide is useful for identifying a compound having detectable affinity to a Nogo-A protein. The present sequence is a Nogo-A polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated truncated Nogo-A polypeptide that corresponds to a truncated form of the Nogo-A protein, useful for identifying a compound having detectable affinity to a Nogo-A protein.
rat; human; Nogo-A; truncated; affinity; membrane-bound protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; Fig 6B; 80pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the vector to the agent, detecting a change in expression of the gene of relative to expression of the gene in an expression vector not exposed to the agent, traating a subject with the agent and identifying fat cell number or size in the subject with the agent comprises an antisense of igonucleotide. The subject comprises a mammal, preferably a human. The coligonucleotide are abject comprises an antisense configurable to the agent, detecting binding of the agent to the oppypeptide to a change in an activity of the polypeptide, treating a cubject with the agent and identifying fat cell number or size in the agent that changes the expression of a gene, and treating the subject comprises providing a subject containing fat cells and an agent that changes the expression of a gene, and treating the subject with the agent under conditions so that fat cell size or number in the cubject is altered. The method is useful for identifying componings that influence fat cell number or size, for preparing a composition for treating or preventing obesity or diabetes. This sequence represents a human polypeptide used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1063
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                       Identifying compounds that influence fat cell number or size for treating or preventing obesity or diabetes by exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         .09

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel composition comprising neurite outgrowth inhibitor (Nogo) and contactin-associated protein-1 (Caspr) or its mimetics or a substance capable of promoting interaction between Nogo and Caspr, in combination with a carrier. A composition of the invention has neuroprotective activity, and may have a use in gene therapy. The composition is useful for treating injury to or disease of the CNS, e.g. spinal cord injury, multiple sclerosis, epilepsy or stroke. The present sequence represents human Nogo-A.
                                                                                                                                                                                                                                                                                                                                                                New composition comprising Nogo and Caspr or a substance capable of promoting interaction between Nogo and Caspr useful for treating injury to or disease of the CNS, e.g., spinal cord injury, multiple sclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1064 IQKSDEGHPFRAYLESEVAISEELVQKYSNSALGHVNCTIKELRRLFLVDDLVDSLKFAV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a binding molecule which binds to human NogoA polypeptide, human NiG, human NiG-D20 or human NogoA 623-640 with a dissociation constant of less than 1000nM. Also described: (1) a polynucleotide encoding the binding molecule; (2) an expression vector or system comprising the polynucleotide; (3) a host cell comprising the binding molecule and a carrier or diluent; and (5) treating the binding molecule and a carrier. The binding molecule has neuroprotective activity, and can be used in gene therapy. The binding molecule is useful in preparing a composition for treating central nervous system (CNS) injury or neurodegenerative disorders. The present exquence represents human NogoA, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1004 SVVDLLYWRDIKKTGVVFGASLFILLSLTVFSIVSVTAYALALALLSVTISFRIYKGVIQA 1063

The invention relates to a myelin-associated glycoprotein (MAG)

derivative comprising a mutation in or flanking MAG Ig-11ke domain 5

(Igd5), excluding the MAG derivative to regulate neutricon reduces or eliminates the ability of the derivative to regulate neurite outgrowth as compared to endogenous or soluble MAG without eliminating binding to neuronal surfaces. The inhibitors of MAG are useful for promoting neural degeneration associated with injuries, disorders, or treating neural degeneration associated with injuries, disorders, or diseases. The disorder, disease, or condition is associated with cappotrosis or results from a demyelinating disease and includes amylotrophic lateral sclerosis, Alzheimer's disease, Parkinson's disease, Huntington's disease, multiple sclerosis, Creutzfeldt-Jacob disease, Huntington's disease, multiple sclerosis, alteral sclerosis (Lou Gehrig's disease), or progressive supranuclear palsy. The present sequence represents the amino acid sequence of human NOGO-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1004 SVVDLLYWRDIKKTGVVFGASLFLLLSLTVFSIVSVTAYALALALLSVTISFRIYKGVLQA 1063

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 45122, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION

GENERAL INFORMATION

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster

FILIS REFERENCE: FILE REFERENCE: 7126-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF EXQ ID NOS: 62517

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 45132

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      probable seed maturation protein [imported] - Arabidopsis thaliana
NyAlternate names: hypothetical protein F27L4.17
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 12-Feb-1999 #sequence revision 12-Feb-1999 #text_change 09-Jul-2004
C;Accession: T01153; T02426; C84627
C;Accession: T01153; T02426; C84627
C;Accession: T01153
A;Redented to the EMBL Data Library, June 1998
A;Pescription: Arabidopsis thaliana chromosome II BAC F2686 genomic sequence.
A;Recession: T01153
A;Status: translated from GB/EMBL/DDBJ
A;Residues: 1-206 cR0U>
A;Residues: 1-206 cR0U>

Isoform 2 is widely expressed excepted for the liver. Isoform 3 is expressed in brain, skeletal muscle and adipocytes. Isoform 4 is testis-specific.
                                                                                                                                                                                                      J. Neurosci. Res. 67:559-565 (2002).

-!- FUNCTION: Potent neurite outgrowth inhibitor which may also help block the regeneration of the nervous central system in adults. Isoform 2 reduces the anti-apoptotic activity of Bcl-xl and Bcl-2. This is likely consecutive to their change in subcellular location, from the mitochondria to the endoplasmic reticulum, after binding and sequestration.
-!- SUBGINIT: Binds to RTN4R. Interacts with Bcl-xl and Bcl-2.
-!- SUBCELIOUAR LOCATION: Integral membrane protein. Endoplasmic reticulum reticulum. Anchored to the membrane of the endoplasmic reticulum
